DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 8/9/2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of application 10/788657 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Response to Arguments

1. This office action is in response to communication filed on 8/9/07. Claims 2-22 have been cancelled. Claim 1 is pending on this application.
2. Applicant's amendment overcomes the following objection/rejection:
 - a. Rejection of claims 2-22
3. Applicant's arguments filed 8/9/2007 have been fully considered but they are not persuasive.

Response to Remarks

Applicant argues that the present application's SFBC can achieve rate-1 for an arbitrary number of transmit antennas, can exploit the frequency selectivity inherent in the channel, and can achieve full space-frequency diversity of $M*N*L$ (Remarks page 8).

Examiner agrees, however none of the argued limitations are claimed in claim 1. Furthermore, a plurality is defined as more than one. Applicant concedes that Lee can achieve rate-1 for the 2 transmit antenna case (Remarks page 8). Therefore the cited Lee reference would read on claim 1 of the present application.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Lee et al ("A Space-Frequency Transmitter Diversity Technique for OFDM Systems", Globecomm 2000, IEEE Global Telecommunications Conference, November 27, 2000).**

Re claim 1, Lee discloses a method comprising:

receiving content for transmission ($X(m)$ in fig. 2) from a plurality of transmit antennae (page 1473, left column, second paragraph. Spatial diversity is well known in the art to use multiple receive antennas); and

generating a rate-one (equation (1) on pg. 1474), space-frequency code matrix (matrix G_2 on pg. 1474) from the received content ($X(m)$ in fig. 2) for transmission on the multicarrier wireless communication channel from a plurality of transmit antennae (Tx_1 and Tx_2 in fig. 2).

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
